- Every template cell is mirrored and checked against its source — the grid now reads mostly green (fetched & verified), with only a few cells still pending.
- A source-pipeline strip is honest about what is in vs missing (e.g. IRDAI portal — 338 fetched, 33 missing).
- Tap x on any column or company to tidy the view; hidden items sit in a tray and restore in one tap, with Save view / Reset.
- Each company is colour-coded into its own block, and any cell opens its full source on click.

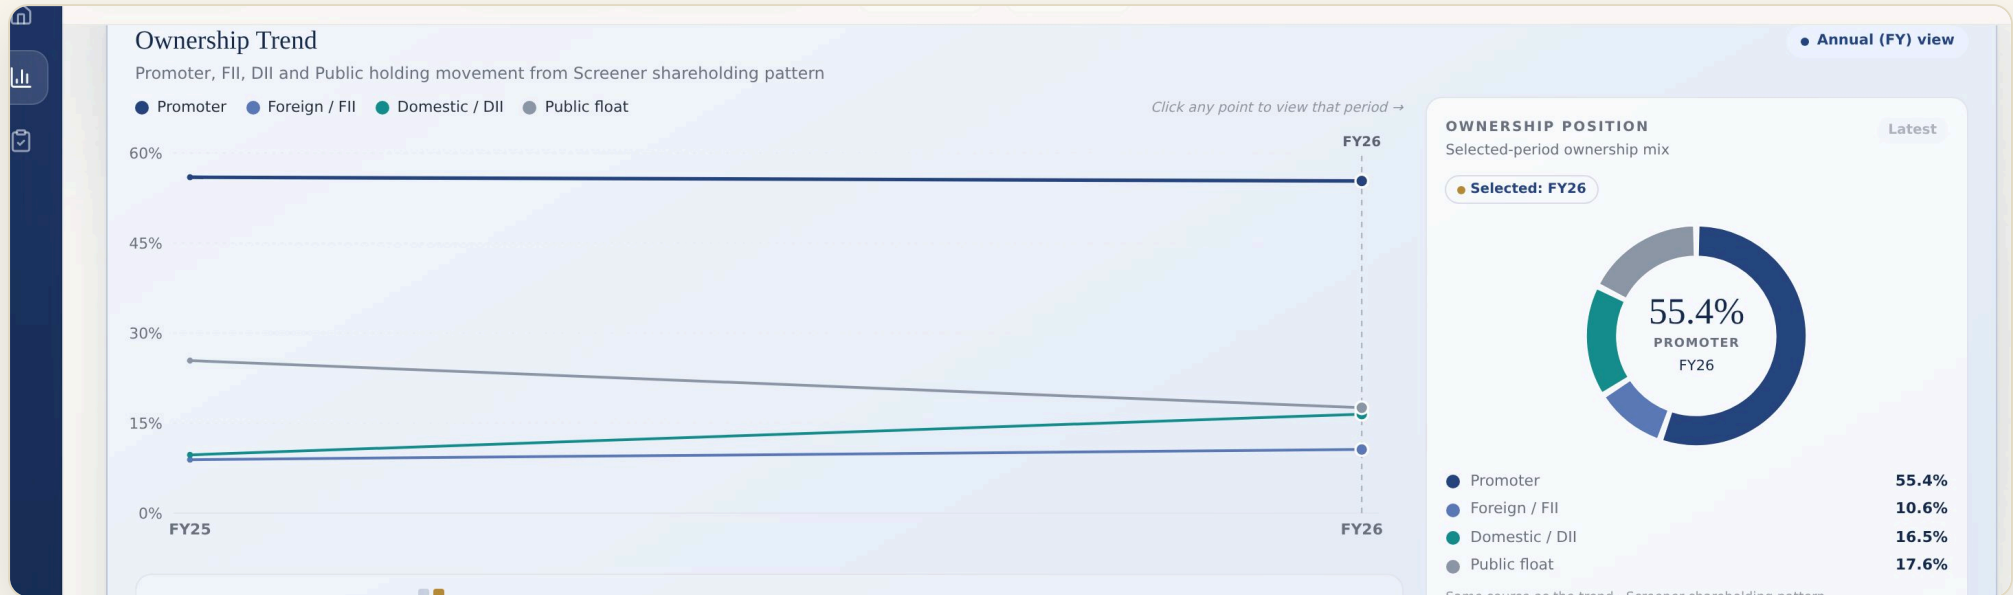

Note: Most cells are now fetched & verified (green); the source-pipeline strip stays honest about the few still pending.

The average target is finally on the page

AVERAGE ANALYST TARGET ₹569 based on 17 reports							-3.2% vs current
ANALYST / BROKER	RATING	TARGET	UPSIDE	DATE	SOURCE	CONFIDENCE	
ICICI Securities Limited	● Buy	₹644	+9.5%	3 May 2026	Open source ↗	● Secondary	
Motilal Oswal	● Buy	₹640	+8.8%	29 Apr 2026	Open source ↗	● Secondary	
Emkay	● Buy	₹650	+10.5%	29 Apr 2026	Open source ↗	● Secondary	
Motilal Oswal	● Buy	₹560	-4.8%	29 Jan 2026	Open source ↗	● Secondary	
Geojit BNP Paribas	● Buy	₹510	-13.3%	6 Jan 2026	Open source ↗	● Secondary	
ICICI Securities	● Buy	₹570	-3.1%	6 Nov 2025	Open source ↗	● Secondary	
Motilal Oswal	● Buy	₹570	-3.1%	29 Oct 2025	Open source ↗	● Secondary	

- A single “Average analyst target” reads the mean of every valid broker target — e.g. ₹569 for Star Health.
- It states how many reports it used (“based on 17 reports”) and the move vs the current price.
- Blank, zero and non-numeric targets are dropped before the mean, so one bad row can’t skew it.
- Every broker call sits below with its rating, target, date and a live source — the average recomputes as new coverage lands.

Ownership movement over time

- An Ownership Trend chart tracks Promoter, FII, DII and Public float across years (FY25 → FY26) — click any point to read that period.
- A live donut shows the selected-period mix — Promoter 55.4%, DII 16.5%, Public 17.6%, FII 10.6%.
- Sourced from the exchange shareholding-pattern filing; bulk / block deals are kept separate (they are individual trades, not the quarter-end pattern).
- Movement reads at a glance — promoter steady while public float eases as domestic institutions build.

Is the valuation earned?

UPDATED THIS WEEK

IMPLEMENTED

Peer valuation matrix

Operating scale for every SAH's peer: market-based multiples where a line price exists.

COMPANY	LISTING	GWP - LATEST FY	GWP GROWTH	P / GWP	P / E	MARKET VALUE	NOTES
Miva Biops	Public	₹9.48 Cr FY18	+27.4%	1.71x	44.0x	₹16.18 Cr	Trades at a premium to Star Health
Star Health	Public	₹20.48 Cr FY18	+10%	1.49x	33.3x	₹30.48 Cr	Largest listed SAH's peer
Care Health	Unlisted	₹8.36 Cr FY18	+21.2%	—	—	—	Unlisted — no public market price
Aditya Birla Health	Unlisted	₹4.95 Cr FY18	+33%	—	—	—	Unlisted — no public market price
ManipalCigna	Unlisted	₹2.08 Cr FY18	+6.3%	—	—	—	Unlisted — no public market price

NAV - BOOK-VALUE VALUATION

NAV-based implied valuation - using **6.17x P/BV** from Star Health (listed peer benchmarks)

NAV / BOOK VALUE	APPLIED P/BV	IMPLIED / SHARE	NET VS NAV IMPLIED
₹3,219 Cr FY18 FY19	6.17x Star Health	₹107.51 (approx - share)	-79.0% (trading below NAV implied)

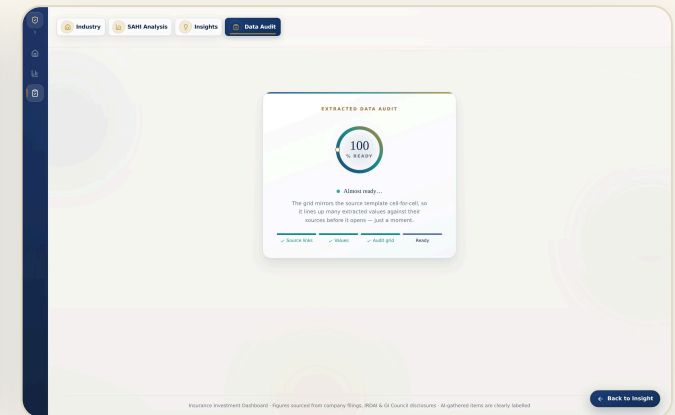

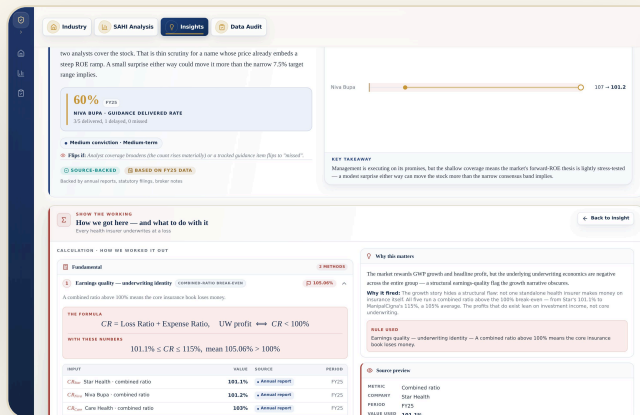

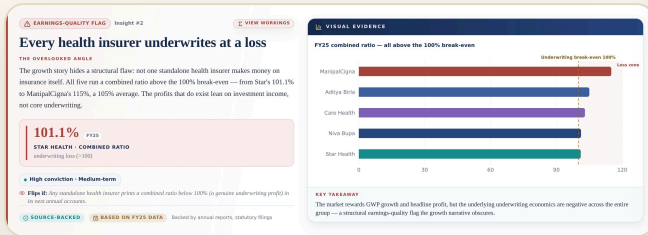

Show calculation

- A redesigned valuation hero: a Street-verdict gauge from the IPO price (₹74) through current (₹86.4) to fair value (₹95) — about +10% upside.
- Valuation lenses show the premium to listed peers (P/GWP 1.71x vs Star 1.49x, ~15% premium) backed by faster growth.
- One clean peer matrix lists every SAH's scale and multiples, marking the unlisted ones honestly as “no public market price”.
- A NAV / book-value card adds the asset-based cross-check, with the full workings one click away (“Show calculation”).

Note: The valuation page was rebuilt this week — Street-verdict gauge, valuation lenses and one clean peer matrix.

Source-first audit trail

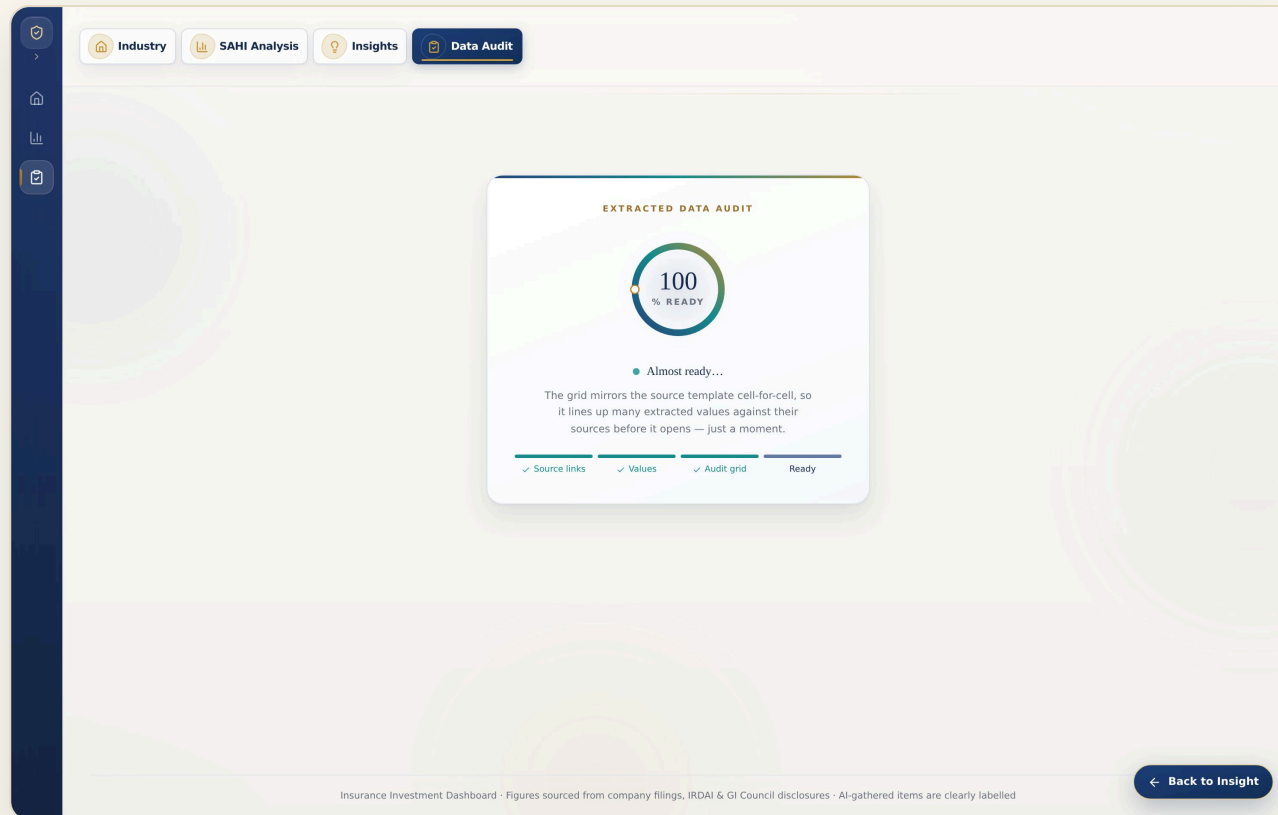

IMPLEMENTED

- Insights open Niva-Bupa-first, in plain language, in a compact left-memo / right-chart layout.
- Flip any card to see the workings: the calculation, the data used, and a “Source preview” (metric, company, period, value, confidence).

- The source button goes to the Data Audit cell first — the verification layer — and only falls back to a chart when no audit mapping exists.
- Empty Technical / Macro / Sentiment lenses are dropped, so a card only shows the analysis actually run.
- Period labels are honest (FY25, latest) — they always show the real period.

Back to the insight after you've checked the source

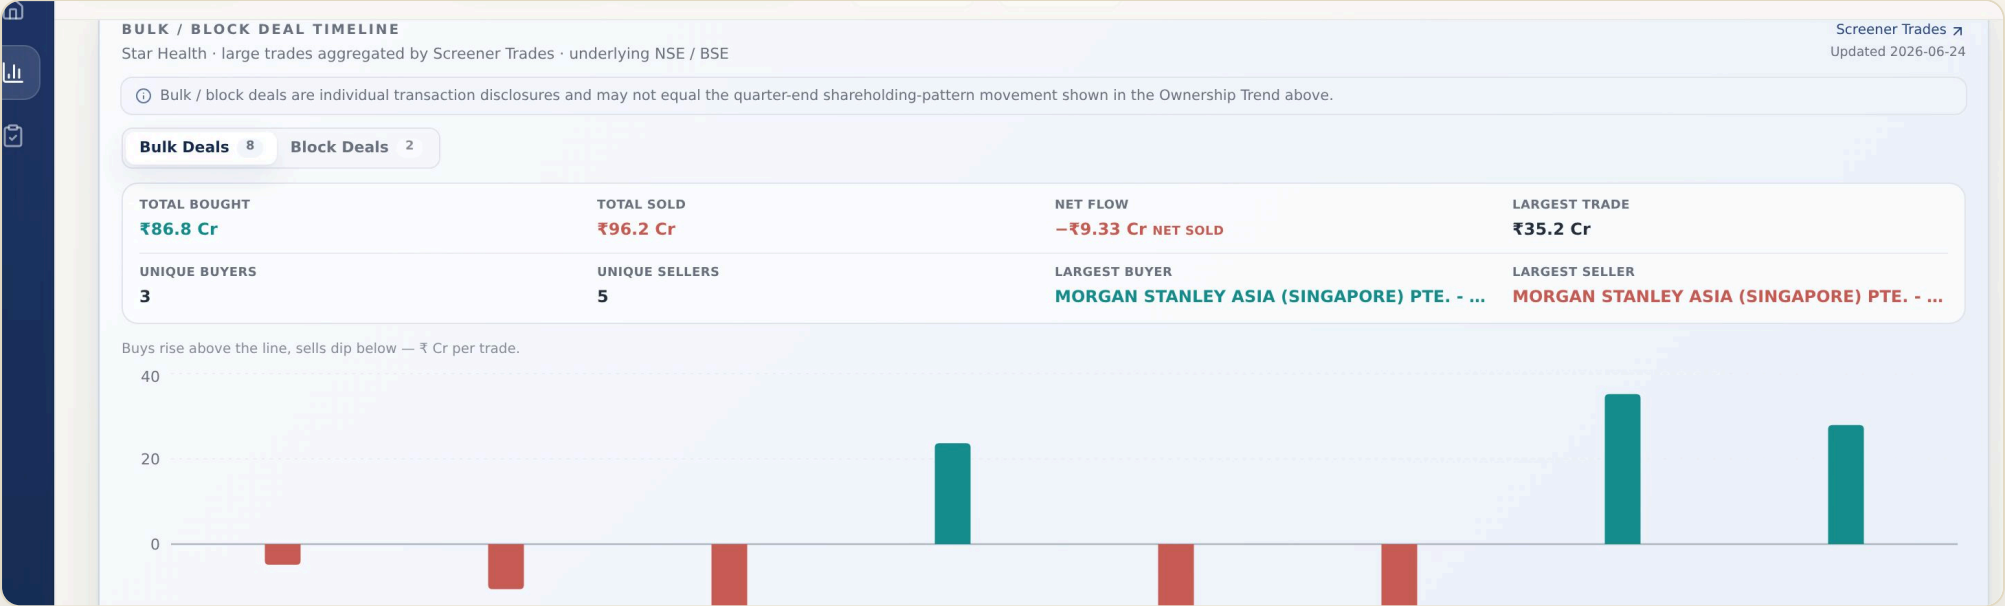

- Jumping to a source drops a “Verifying from insight” breadcrumb and pre-selects the right company in the Data Audit grid.
- A floating “Back to Insight” button stays on screen the whole time you’re in the source.
- Clicking it returns you to the exact card you came from — re-flipped to its workings — so you never lose your place.
- This closes the loop: read the insight → verify the number at source → return, in two clicks.

Deal records, now with the full picture

UPDATED THIS WEEK

IMPLEMENTED

Reliable links, and the status is clear

IMPLEMENTED

- Each figure shows its source status plainly — click it to see “Fetched & verified”, the source pipeline and a working link.
- Links that tend to break (the exchanges’ session-based pages) are automatically swapped for a stable public page.
- The “as printed” value and the dashboard’s final value sit side by side, with the exact document referenced.
- It’s always clear which numbers are sourced and verified, and which are still pending.

- Drop in your Excel and every cell is checked, line by line, against the dashboard — all in your browser, nothing leaves your computer.
- Five clear outcomes sit on top — Matched, Source / basis differs, Mismatched, Blank in your file, Missing in the dashboard.
- Every result row is clickable — it jumps straight to that exact cell in the Data Audit grid and highlights it, so there's no manual searching.
- The verifier is a movable, resizable window beside the grid that remembers recent files to re-check in one click. Sample run: 1,706 matched, 44 source / basis, 362 mismatched, 830 blank-in-file, 96 blank-in-dashboard.

In the grid, only the problems light up

- Once a file is checked, the grid switches to a verification view: matched cells go quiet and neutral, so only the issues draw the eye.
- Soft, premium tints — red for a value mismatch, amber for a source / basis difference, blue for blank-in-your-file, purple for missing-in-dashboard.
- A sticky bar shows the live counts and a one-tap filter that dims everything else, with “Back to Verifier” and “Exit” to restore the normal grid.
- Click any flagged cell for the full story — your value vs the dashboard, the difference, the source, and a “Back to Verifier row” link.

Weekly, monthly, yearly average trends

- A live daily close / volume / delivery chart for the stock, with hover read-outs for any day.
- One clean “Average” control rolls it up Weekly, Monthly or Yearly — the chart and the summary update instantly.
- Averages skip days with no trading instead of counting them as zero.
- The roll-up reads at a glance — latest period, change vs prior, and average volume.
